Efe Kodzhagioz

IT Student & Developer — Inholland University of Applied Sciences

Netherlands · kocagozefe@gmail.com · linkedin.com/in/efe-kocagoz-73995524b · github.com/efekocagozz

PROFILE

IT student and developer who enjoys turning ideas into working software. I've built several frontend and backend projects in Agile teams, mostly on the backend: REST APIs, authentication, data models and tests. Build it, break it, fix it, understand it. Now I'm learning the fundamentals of cybersecurity, cloud and AI to prepare for a specialization in the industry.

EDUCATION

BSc Information Technology 2024 — Present
Inholland University of Applied Sciences, Haarlem

- Coursework: OOP, web development, databases (SQL & NoSQL), software architecture, networking; a Scrum team project every semester.

PROJECTS

Banking Application · Team of 4 github.com/RashidIsmayilzada/Banking-App
A banking app where customers manage accounts and admins keep everything in check.

- Built the REST API behind the admin panel, with login and role-based access (Spring Security, JWT) so every user only sees what they should.
- Added rate limiting, OpenAPI docs and automated tests (JUnit, Mockito, H2); shipped with CI/CD and Docker.

Java · Spring Boot · Spring Security · Spring Data JPA · H2 · Vue.js 3 · JWT · Maven · Docker

SportsMeet · Personal project github.com/efekocagozz/sportsmeet-v2
Finding and joining local sports events; built solo, from the database to the interface.

- Built a REST API in PHP with JWT login, admin and user roles, and an approval flow for join requests, structured into controllers, services and repositories.
- Added notifications and live weather per event; built the frontend from reusable components documented in Storybook, run with Docker Compose.

PHP · Vue 3 · Pinia · Tailwind CSS · Storybook · SQLite · JWT · Docker Compose

Incident Management System · Team project github.com/DarlingtonJones24/NOSQLDatabaseProject
A service-desk tool for reporting and resolving IT incidents. Built most of it, mainly the backend.

- Built ticket handling (priorities, statuses, filtering) and a Swagger-documented REST API; secured accounts with hashed passwords, cookie login and roles.
- Modelled tickets as MongoDB documents with embedded comments and employee info; built the statistics dashboard with aggregations.

C# · ASP.NET Core MVC · MongoDB · Razor · BCrypt

Restaurant Ordering System · Team project github.com/efekocagozz/RestaurantOrderingSystem
Follows an order from the table to the kitchen to the bill. Built the employee side.

- Built employee management with four roles (waiter, bartender, chef, manager) and a hashed-password login that sends each role to its own dashboard.
- Separated logic from data access with controllers, services and repositories, using plain, injection-safe SQL on SQL Server (Azure).

C# · ASP.NET Core MVC · SQL Server · Azure SQL · Razor

TECHNICAL SKILLS

Languages	Java, C#, SQL, PHP, JavaScript, HTML, CSS
Frameworks	Spring Boot, Spring Security, Spring Data JPA, ASP.NET Core MVC, Vue.js 3, Tailwind CSS
Databases	SQL Server, Azure SQL, MongoDB, SQLite, H2; relational and document data modelling
Testing & APIs	JUnit, Mockito, AssertJ, REST API design, OpenAPI / Swagger, JWT
Tools	Git, GitHub, GitHub Actions, Docker, Maven, Linux
Practices	OOP, MVC & layered architecture, Agile / Scrum

OTHER EXPERIENCE

Hospitality & DJ work

- Bar work and DJing at events: staying calm and communicating when things don't go to plan.
